NOTES:
1. Customer facilities shall comply with Company Standards, the National Electrical Code (NEC), and authorities having jurisdiction.
2. Customer shall install meter enclosure, conduit, weatherhead, point of attachment and conductor to point of attachment.
3. A minimum of 3'-0" of each conductor shall extend from the top of the service mast. The neutral shall be marked with white tape at both ends. Neutral can be bare.
4. Main breaker should be within 2'-0" of meter. Outside wall is recommended.
5. Clearance. (See Section 7.3)
   a. Point of attachment shall be either accessible to Company's bucket truck or have enough surface (such as wall or building structure) and sufficient ground space.
   b. Additional height may be required to maintain clearance.
   c. Point of attachment can be no higher than 21'.
   d. Minimum 10'-0" height to bottom of drip loop allowed when all traffic under wire does not exceed 8'-0" height.
6. No telephone or cable attachment allowed on mast (NEC).
7. Any Service greater than 200 amps, consult the Company.

911 address shall be a minimum 3" lettering marked on structure, or meter enclosure and should be visible from street.

CAUTION:
Connection points, when such obstructions interfere with an overhead service, may need to be moved or converted to underground (if possible), at the customers expense.

METER CLEARANCES

CAUTION: No gas meters within a 3' radius of meter enclosure.

For residential service, the meter is to be located on the outside of the building on the side of the residence within three feet of the front wall and outside of the fences on the side most economical to reach the company's facilities. Main Breaker should be located outside within 2 feet of meter.

Notes:
1. NEVER build structures under or over existing electrical lines or facilities. Check with the Company for clearances.
2. Contact Company for clearances prior to pool construction.
3. See Section 8.4 for meter location. Connection point shall be pre-approved by the Company.
4. See TABLE for maximum recommended service lengths. Longer lengths than those in the table may require the Company to install an additional pole. This may involve additional cost (typically $1500 or more), to the customer.
5. The Customer is responsible for clearing and maintaining all right of way.

CHECKED BY: JED SCALE: None
DRAWN BY: krich95

ENTERGY SERVICES, INC.

2018 Edition
A customer supplied and installed teaser wire is required from the neutral lug to a 5th terminal mounted on the left side of the meter block between the line and load terminals.

**CAUTION:**
For 480 volt service, see drawing D9-4.

For 277/480 volt service, the customer shall furnish and install a company approved, company lockable, non fused disconnect switch on the supply side of the meter base and a separate load side disconnect with overcurrent protection within 2 ft. of the meter. The company shall control the supply side disconnect. It shall be labeled "Utility Disconnect" see § 5 Labels and Disconnects and it shall be available to the company 24 hours a day without notice.

**NOTES:**
1. Ungrounded conductor with the higher Voltage to Ground (Phase marked C) must be marked orange.
2. All sockets, except residential single phase less than 320 Amps, shall have a manual mechanical gang operated bypass switch.
3. Load and supply wires shall not cross in the meter socket.
